Q&A

Exam : **190-510**

Title : Domino R5 Designer Fundamentals

Version : DEMO

1.Lilly has created a form that contains a field of Authors data type. The Role
[Manager] is listed in the Authors field. Arthur is a reader in the ACL of the
database that contains this form and is assigned the [Manager] Role.
What can Arthur do with documents created from this form?

A. Read documents only since his ACL is Reader.
B. Edit all documents created from any form within this database.
C. Edit documents created from this form by other users and only read all other
documents within the database.
D. Edit and delete documents created from this form and only read other documents
within this database.
Answer: A

2.Kristy created a database with several views. Her default view has a read access list
limiting use of the view to only some of the database users.
What will happen when users restricted from using the view open the database for
the first time?

A. Users will be prompted to choose an alternative view.
B. Users will see a view other than the default view.
C. Users will not be able to open the database.
D. Users will see the view even though they aren't included in the read access list.
Answer: C

3.There are both Web browser users and Notes client users at Adam's company. He
wants to allow Web browser users to access an application, but not allow access by
Notes client users.
Which one of the following would he assign in the ACL?

A. No Access to Anonymous, and no entry for -Default.
B. Reader access -Default-, and No Access to Anonymous.
C. Reader access to -Default-, and no entry for Anonymous.
D. No Access to -Default-, and Reader access to Anonymous.
Answer: D

4.Henry wanted to use the Groups and Roles dialog box to find out why Lisa, a
content creator, is unable to author documents in an application. However, the
dialog box was NOT available.
Doing which of the following allows the dialog box to appear?

A. Enforcing local encryption.
B. Enforcing a consistent ACL.
C. Placing Lisa's name in a role.
D. Increasing Henry's ACL access level to Manager.

Answer: D

5.Ronny has submitted some technical support questions to the STS company on their
Web site. After 24 hours he goes to the STS folder on the site and reviews feedback.
When he selects the folder, he receives a message that he is not authorized to access.
However, he authenticated using and SSL Client Certificate and has Author access
in the database.
Why can't Ronny open the folder?

A. He needs Editor access or higher.
B. He needs to be added to the folder Read Access list.
C. He needs to be added to the Directly Link Access list.
D. He needs to be added to the View Read Access list.
Answer: C

6.Which one of the following access levels does Erhard need to create Roles in the
ACL?

A. Author
B. Manager
C. Designer
D. RoleCreator
Answer: B

7.APP1. NSF needs to replicate between two servers. ServerA should only be able to
add and modify information in ServerB's replica copy of APP1. NSF. ServerB
should be able to pull new and modified information from ServerA's replica copy of
APP1. NSF, but should not be able to write new or modified information to
ServerA's copy. This is not happening.
Which one of the following levels of access should each server have?

A. ServerA should have Author access to APP1.NSF on ServerB.
ServerB should have Reader access to APP1. NSF on ServerA.
B. ServerA should have Editor access to APP1.NSF on ServerB.
ServerB should have reader access to APP1. NSF on ServerA.
C. ServerA should have Manager access to APP1. NSF on ServerB.
ServerB should have Reader access to APP1. NSF on ServerA.
D. ServerA should have Editor access to APP1.NSF on ServerB.
ServerB should have Depositor access to APP1. NSF on Server A.
Answer: B

8.Which one of the following does this formula do when it is in a form action?
@MailSend("User1";"";"";" Urgent meeting";" Please
attend";"")

A. Sends a memo containing a subject and a copy to User1.
B. Sends a memo containing two body field entries to Use1.
C. Sends a memo containing a subject and a remark to User1.
D. Sends a memo with the document attached as a document link.
Answer: C

9.What is the minimum level in the Access Control List that Larry can assign users
who must run a shared agent in the Certkiller Sales database?

A. Designer
B. Reader
C. Author
D. Depositor
Answer: B

10.Ivy, the database manager, has not selected the Create personal folders/views option
for Olga, an Author in the database ACL.
Which one of the following statements describes how Olga is affected?

A. She cannot create any personal folders or views.
B. She can create personal folders, but not personal views.
C. She can create personal folders and views which are stored locally.
D. He can create personal folders and views which are stored on the server.
Answer: C

11.Hannibal wants to protect the HTML and graphics files used in his Web site
application.
Which one of the following will work?

A. Enforcing ECLs.
B. Enforcing consistent ACLs.
C. Creating File Protection documents.
D. This cannot be done using Notes and Domino.
Answer: C

12.Rene created a form read access list for a form in his web-enabled database.
Which is true about his form read access list when users access the database via the
web?

A. Web users not listed in the form read access list will not be able to open
documents created with that form.
B. Form read access lists are not supported when databases are accessed via the web.
C. Web users will see links to documents that they cannot access.

D. Anonymous users will see the documents regardless of the form read access list.

Answer: A

13.Jean Philip has set up SSL for the "Appointment" database and SSL is set up on the Domino Server. He has also selected "Maximum Internet name & password access" in the ACL Advanced settings as Reader. The group "Road Sales" is Editor in the ACL. Default is Author. Some of the members of "Road Sales" connect to the database through a Web client. The Web users authenticate using SSL Client certificates.

What level of access will they have in the database?

A. No access
B. Reader
C. Editor
D. Author

Answer: C

14.Ed has created an access controlled section and has placed a sign-enabled field within this section.

Which applies to the signature?

A. The signature applies to the entire document and is generated when the document is mailed.
B. The signature applies only to the section and is generated when the document is mailed.
C. The signature applies to the section and the document.
D. The signature applies only to the section and is generated when the document is saved.

Answer: D

15.Which is a true statement regarding acceptable names that can be placed in the ACL?

A. Wildcard characters (*) can be used in the ACL, except in the organizational unit components of a name.
B. You can add to an ACL the names of any individuals with certified Notes user IDs.
C. Hierarchical naming cannot be used in the ACL.
D. User, server, and group names can be added to the ACL but database replica IDs are not an acceptable entry in the ACL.

Answer: B

16.Harry would like approval of vacation requests to bear his signature when the document is mailed back to the person requesting vacation.

What does the form need to contain in order to have an electronic signature attached to the document when mailed?

A. The reserved field "MailOption".
B. One sign-enabled field only.
C. Access controlled section.
D. A minimum of one sign-enabled field and a SendTo field.
Answer: D

17.Lars has a workflow application and would like to set up distribution of the information through a form that employs automatic e-mailing. His users are primarily remote.
Which is a reason why he would have chosen this method over a central shared database?

A. Replication is faster.
B. Remote users only need access to mail instead of accessing a remote database.
C. Requires less disk space.
D. Workflow always takes less time.
Answer: B

18.Elvis does not see the salary documents in the Employee Personnel view.
What list does Elvis need to be a member of to see these documents?

A. View Access List
B. Form Read Access List
C. Form Create Access List
D. Database Access Control List
Answer: B

19.Sven created a form read access list for a form in his web-enabled database.
Which is true about his form read access list when users access the database via the web?

A. Web users not listed in the form read access list will not be able to open documents created with that form.
B. Form read access lists are not supported when databases are accessed via the web.
C. Web users will see links to documents that they cannot access.
D. Anonymous users will see documents regardless of the form read access list.
Answer: A

20.Boris has chosen to use individual mail databases in his workflow application because his users are remote and this will allow remote users to access mail instead of a remote database.

Which is true regarding this workflow application method?

A. Workflow process will be quicker.
B. Forms must be stored with the documents that are sent and replication times may
be longer due to increased document size.
C. Requires less disk space than a central database.
D. Forms do not have to be stored with documents that are sent.
Answer: B
