Q&A

Exam   :   HPE2-K44

# Title   :   Implementing Advanced HPE Backup and Recovery Solutions

Version   :   DEMO

1.Which resource would affect the per stream deduplication to perform efficiently on a media server?

A. NVDIMM should be used to cache the proxy the backup stream.

B. On a Media server with intel CPU. enable hyperthreading.

C. Adding more NICs to the Media server, to share the load between backup streams.

D. Reserve required memory space for each backup stream.

Answer: A

2.Refer to the exhibit.

Backup Server

Which backup topology is presented in the exhibit?

A. server-less backup

B. remote backup

C. push agents

D. local backup

Answer: B

3.What is the maximum number of target arrays supported on HPE 3PAR Remote Copy in an M-to-N configuration?

A. 2

B. 4

C. 6

D. 8

Answer: A

4.Which HPE StoreOnce Backup System support Federated Catalyst?

A. VSA based StoreOnce models

B. all 6000 series

C. all StoreOnce models with FC connectivity

D. all HPE StoreOnce models

Answer: B

5.Which statement is true about HPE 3PAR replication in a 1:1 topology?

A. Simultaneous synchronous and asynchronous periodic replication is supported.

B. Bidirectional replication requires 4 controller nodes.

C. Primary array supports RCIP replication to first target array and RCFC to second target array.

D. Primary and target arrays require the same number of controller nodes.

Answer: C
