20. You have created a journal table. You need to write code that identifies whether a line in the journal is

The safer , easier way to help you pass any IT exams.

empty. You will use this functionality in many places. Using Microsoft Navision standards, how would you

implement this code?

A. Since functions cannot be created in table objects, create a function in a codeunit that accepts a record

variable as a parameter and returns true if the line is empty and false otherwise.

B. Because the code can be placed in one Boolean expression, you should create a global variable that

holds the value of the expression and use that variable in all of the objects.

C. Create a function in the journal form that returns true if the line is empty and false otherwise. It will be

used mostly by the form anyway.

D. Create a function in the journal table that returns true if the line is empty and false otherwise.
