**Title**: Rational object orienten

analysis and design-part2

Version: DEMO

- 1. What is true of iterations?

  A. A lifecycle phase may contain many iterations.

  B. Iterations may contain many phases.

  C. A major milestone marks the end of every iteration.

  D. You establish plans for each phase, but not for iterations.

  E. A construction iteration cannot include any activities from the Requirements workflow. Answer: A

  2. Stereotypes in the UML support generalization among model elements.

  A. True

  B. False

  Answer: B
  - 3. What is a derived attribute?
- A. An attribute whose value may be calculated based on the value of other attributes within the class.
- B. The value of an attribute for a particular object.
- C. An attribute that is retrieved from a database.
- D. An attribute that is inherited from a superclass.
- E. An attribute with a fixed value.

Answer: A

- 4. What is an abstract class?
- A. A superclass for which no direct instances may be created.
- B. A class that logically exists beyond the scope of the program that created it.
- C. A class that manages the interface communications within a system or among different systems.
- D. A class whose instances are collections of other objects.
- E. A class that serves as a template for other classes.

Answer: A

5. What characterizes a model?

A. It is the same thing as a diagram.
B. It is a complete description of a system from a particular perspective.
C. It is rarely needed if an iterative lifecycle is used.
D. It is not applicable to software development. Answer: B
6. What pase defines an association class?
A. Is primarily a construct used during detailed design.
B. Specifies that a class has attributes and operations.
C. Is represented with a second association line next to the original.
D. Should not be represented on class diagrams during analysis.
E. Specifies that in a many-to-many association, each link has attributes and possibly operations. Answer: E
7. Which of the following is not part of a use-case realization? (Select all that apply.)
A. Sequence diagrams
B. Use cases
C. Collaboration diagrams
D. Class diagrams Answer: ACD
8. Which of the following are characteristics of a supplier object in a client-supplier relationship? (Select all that apply.)
A. You can reuse it independent of its existing clients.
B. It is an instance of a subclass.
C. It provides a service or handles a message.
D. It invokes a service or sends a message.

Answer: AC

9. What is a container class?

- A. A class whose instances are collections of other objects.
- B. A class for which you may create no instances.
- C. A class that logically exists beyond the scope of the program that created it.
- D. A class that serves as a template for other classes.
- E. A class that manages the interface communications within a system or among different systems.

Answer: A

- 10. What is a scenario? (Select all that apply.)
- A. A series of use cases that describe the functional requirements for the system.
- B. An instance of a use case.
- C. Something that has state, behavior, and identity.
- D. A set of time-ordered steps or statements expressed in natural language.

Answer: BD
